

ANIMUSIC 2

Cutting edge computer animation and a new collection of modern musical grooves and soundscapes combine in the second "virtual concert" from composer/director Wayne Lytle. Using custom developed, state-of-the-art computer animation software technology, Lytle invents unique self-playing graphical instruments, perfectly synchronized to the original digitally created soundtrack. Each note is performed in perfect precision by its instruments, some of which resemble real-world instruments, and while others appear unlike any earthly object.

The production team spent three years creating **Animusic 2**. The result is more complex instruments and inspired arrangements, as infectious as the original. Case in point: "Gyro Drums," which is comprised of 150 drums and cymbals arranged in 3 concentric gyroscopic spheres; and "Cathedral Pictures" which plays Mussorgsky's "Promenade" on a giant light-beam emitting pipe organ with drums, rock bass, and more with pyrotechnics.

Animusic 2 is a new genre of spectacular music entertainment for the entire family.

Presented nationally by WLIW New York. ST and CC.
