

ANIMUSIC

Cutting edge computer animation and a diverse collection of modern musical grooves and soundscapes combine in a "virtual concert." Using custom developed, state-of-the-art software technology, director Wayne Lytle invents self-playing graphical instruments, perfectly synchronized to the digitally created soundtrack. ANIMUSIC draws you in its reality like no place you have ever been - a new dimension of sight and sound.

From the robotic laser-precision of "Future Retro" and rapid-fire ball bearings of "Pipe Dream" to the serene acoustic beauty of "Aqua Harp," each animation is an intricate melding of music and visuals.
